

Calciovin

*lactose- &
gluten-free*

400 mg Calcium
150 mg Magnesium
5 mg Zinc
500 µg Copper
250 µg Manganese
25 µg Selenium
7.5 µg Vitamin D₃

Helps maintain strong and healthy bones

The unique combination of minerals, trace elements and Vitamin D₃ in **Doppelherz® aktiv Calciovin** tablets is ideal to support the proper constitution and the maintenance of bones and teeth. Additionally, regular intake of **Calciovin** tablets contributes to proper heart, muscles and nerves function.

Calcium is well-known for its role in maintaining strong bones and teeth. It also plays a role in blood coagulation and in muscle function.

Magnesium is also required to strengthen the structure and to sustain mineralization of bones. Magnesium additionally contributes to the proper function of the energy-yielding metabolism and supports normal nerve and muscle functions.

Zinc is a cofactor required in many cellular processes, such as the synthesis of osseous tissue by specialized cells.

Vitamin D₃ is important for bone health because it facilitates calcium uptake from the intestine and promotes its incorporation into the bones.

Copper is needed for the synthesis of collagen, one of the main components of connective tissues, which builds the frame on which bone minerals are deposited.

Manganese and **Selenium** both support bone health and help protect bone-synthesizing cells from oxidation.

One tablet contains:

400 mg Calcium, 150 mg Magnesium, 5 mg Zinc, 500 µg Copper, 250 µg Manganese, 25 µg Selenium, 7.5 µg Vitamin D₃.

Recommendations:

Take 1-2 tablets daily at meal with enough liquid. Do not chew.

Do not exceed the stated recommended daily dosage!
Food supplements should not be used as a substitute for a varied diet.
The product should be stored out of the reach of children.

Energetic value:

1 tablet corresponds to 0.1 kcal/0.4 kJ.

Do not store above 25°C.
